Infrared Chalcogenide Glasses IRG 22, IRG 24, IRG 25, IRG 26 and IRG 27

Product Information

The IR glasses have excellent transmission in the SWIR, MWIR, & LWIR. Physical properties such as low dn/dT and low dispersion enable optical engineers to design color corrected optical systems without thermal defocusing. The IRG family of Chalcogenide glasses is optimized for pairing within the family of IR glasses and with other IR materials to support cost effective and high performance optical designs. These glasses encompass the common IR transmission bands: 3–5 μm and 8–12 μm , but can transmit as low as 0.7 μm . Furthermore, the IR series of glasses can be processed by conventional grinding and polishing, single point diamond turning, or molding to support low to high volume component level fabrication.
