

High visibility for food presentation

SCHOTT Termofrost® CRS View/T.View: transparent doors for cold rooms

SCHOTT Termofrost® CRS View: slim door frames for improved visibility

Product description

SCHOTT Termofrost® CRS View is a glass door system designed to improve the visibility of drinks, dairy products, flowers or fresh meat displayed in cold rooms within supermarkets, petrol stations, kiosks, flower shops or cash & carry markets.

The door system turns the front of a cold room into an exciting merchandising area. Eliminated vertical or very slim door frames enlarge the display area and provide a panoramic view to chilled products or food. Due to the superior design and manufacturing, our cold storage door system helps to control temperatures and combines attractive presentation with energy efficiency.

The system is available in two versions:

- SCHOTT Termofrost® CRS View: slim door profiles
- SCHOTT Termofrost® CRS T.View: transparent vertical door

Both door versions can easily be adapted to your requirements. Three colors allow individual adaption. The system is available in three heights: Standard height, Super height for installation on a plinth and Walk-In for installation on floor level. The system requires minimal installation time as it consists of doors and frames delivered ready for installation.

SCHOTT Termofrost® CRS T.View: perfect visual presentation for easy orientation.

Benefits from

- Clear and wide view to the inside of a cold room
- High stability glass doors

Technical Specifications
